1. Environmental Management Philosophy

BH EVS practices greenhouse gas emission reduction, energy efficiency improvement, waste reduction, and eco-friendly technology adoption through environmental management, and collaborates with all stakeholders to prioritize environmental protection.

2. Environmental Management Policy

To practice environmentally friendly management, we comply with the following principles to minimize environmental impact and strengthen sustainability in all business activities.

1. We minimize the use of environmentally harmful substances when using raw materials, chemicals, and non-hazardous/hazardous waste at our business sites, and strive to reduce waste.
2. We strive to help customers diagnose and mitigate the environmental impact caused by our energy/greenhouse gas consumption.
3. We strive to mitigate negative impacts on the health and safety of customers and consumers.
4. We strive to develop products that minimize harm to the local environment during product use.
5. We strive to minimize the environmental impact arising from end-of-life products, such as non-hazardous/hazardous waste and microplastic contamination.

3. Scope of Application

All officers and employees of our headquarters, domestic/overseas subsidiaries and branches shall perform their duties in accordance with this Environmental Management Policy. In addition, officers and employees are encouraged to ensure that suppliers, including partners, contractors, and outsourcing partners, also comply with this Environmental Management Policy.

4. Implementation

a. Energy Consumption and Greenhouse Gas

Qualitative Objectives:

1. Conduct employee training on energy conservation and climate action.
2. Record and manage energy and greenhouse gas consumption.
3. Introduce equipment to improve product energy efficiency or reduce energy consumption at business sites.
4. Disclose energy and greenhouse gas emissions.

Quantitative Objectives:

1. Reduce absolute Scope 1 and 2 emissions by 10% by 2030 from a 2023 baseline.
2. Provide energy conservation and climate action training to 100% of employees by 2030.

b. Raw Materials, Chemicals, and Waste

Qualitative Objectives:

1. Substitute less harmful or less toxic materials when using materials.
2. Conduct employee training on raw materials, chemicals, and waste.

Quantitative Objectives:

1. Reduce waste by 10% by 2030 from a 2023 baseline.
2. Provide energy conservation and climate action training to 100% of employees by 2030.

c. Eco-Friendly Services and Support

Qualitative Objectives:

1. Have the carbon footprint of our products verified and provided to help customers diagnose and reduce their carbon footprint.
2. Reduce our greenhouse gas emissions (Scope 1 and 2) and provide data to help customers diagnose and reduce their greenhouse gas emissions (Scope 3).
3. Collect end-of-life products from customers.

Quantitative Objectives:

1. Have the carbon footprint verified and provided to customers for 10% of wireless charger products by 2030.
2. Disclose 100% of greenhouse gas (Scope 1 and 2) emissions on the website by 2030.
3. Expand end-of-life product collection by 30% by 2030 from a 2023 baseline.

d. Customer Health and Safety

Qualitative Objectives:

1. Provide user manuals to customers for the health and safety of product users.
2. Educate customers on safe and correct product usage.
3. Conduct research to improve product safety.

Quantitative Objectives:

1. Maintain zero product recalls by 2030.
2. Maintain zero safety accidents resulting from product use by 2030.

	Environmental Management Policy	PAGE	4/5

		Rev. No	1

- Maintain 0% product safety-related claims by 2030 from a 2023 baseline.

e. Product Use

Qualitative Objectives:

- Design products to improve energy efficiency during use.
- Research the carbon footprint of key components.
- Conduct Life Cycle Assessment (LCA) for key products.

Quantitative Objectives:

- Conduct life cycle studies for 100% of all products by 2030.

f. End-of-Life Products

Qualitative Objectives:

- Design products or packaging to be minimized and easily disassembled or recycled.
- Collect products that consumers can no longer use for recycling or reuse.

Quantitative Objectives:

- Target a 30% increase in product recovery rate by 2030 from a 2023 baseline.
- Target a 30% increase in product reuse rate by 2030 from a 2023 baseline.
